

40MM NON-LETHAL AMMUNITION MARKING AGENTS

The Blunt Impact Projectile (BIP) has a clear competitive advantage over other less-lethal kinetic energy ammunitions.

SDI's disruptive technologies can be used for both short and long distances with a greater level of safety, accuracy and reliability than competing products.

The 40mm BIP MP Marking Powder round utilizes SDI's collapsible head technology and carries a colored powder that temporarily marks the target upon impact. This type of marking ammunition is crucial for its psychological effect in riot and crowd control scenarios.

The BIP MP helps to assert authority in specialized scenarios where soldiers or law enforcement officers require immediate dispersion of an unlawful crowd.

When faced with a decision at a checkpoint, unruly protest or during a border patrol incident, the BIP MP provides an alternative option that can assist in enforcing compliance and deterrence.

The BIP ML round, similar to the BIP MP, delivers a marking liquid agent that is semi-permanent in nature. In many riot and crowd control situations, law enforcement officials are unable to apprehend individuals due to tactical constraints. With the BIP ML, military and law enforcement officials can mark the group leaders who are breaking the law for future apprehension.

The discharge of a colored liquid gives the target the impression that they are being targeted. Additionally, the BIP ML offers a psychological deterrent in helping to enforce compliance on the subject.

All of the SDI family of BIP products are based around patented, collapsible head technology which acts as a riot deterrent, a crowd-control medium and an alternative to lethal force in critical situations that demand less-lethal solutions.

The BIP ML's colored liquid semi-permanently marks target for future apprehension

Desired effect of the BIP MP
